

Pressure Concentration Check

One problem this solves: Where is pressure actually concentrating, before it becomes obvious?

By Mouayad Al Mohtar, author of RUISA™ · RUISA™ Operational Coherence Framework

- **Roles** — Is one person watching for pressure building, or is everyone assuming someone else is?
- **Users** — Would the right person notice if pressure shifted to a new area right now?
- **Information** — Is pressure information coming from one source, or cross-checked across more than one?
- **Situation** — Is the picture you're using more than an hour old?
- **Actions** — If pressure is concentrating somewhere, is there a named next step, or just awareness of it?

This is a reflective exercise based on the RUISA™ framework — not a clinical or governance tool, and not a substitute for professional judgment, policy, or escalation protocols.
